Server:Request/Response

Data types:

RouteInfo{

Id:string;

name:string;

}

Road{

?

}

Route{

Info:RouteInfo;

data:Road;

}

Credentials{

name:String;

password:String;

}

Site sends packet: //want to include info:any; if you are ok with this change type your name here;

packet{

request:string;

data:any;

}

Site wants to receive Response://also I want error:string(number) to be here and info:any to separate additional info from data;

 Response{

response:String;

data:any;

}

// we have no intention to make requests from server,right?

Now the list of requests/response:

{request:"getRoute" data:RouteInfo} {response:"getRoute" data:Route}

{request:"addRoute" data:Route} {response:"addRoute" data:RouteInfo}

{request:"login" data:Credentials}{response:"login" data:string}

{request:"getRouteList" data:""} {response:"login" data:RouteInfo[]}

Add your propositions here;
